

BlueBridge Networks® Managed Storage Solutions will protect your **mission critical data** from a catastrophe, a crucial step toward the **long-term health** and **viability** of your organization.

Service Features

- Guaranteed Performance and Service Availability
- 24x7x365 Operational and Emergency Support
- Custom Portal Access
- Problem/Change Management
- Remote Monitoring
- Remote Service Desk
- Customized Online Reporting
- Message Level Backups for Exchange Server

BlueBridge Networks' managed storage solution offers a comprehensive, fully managed data protection and application recovery service providing continuous data protection for critical business information. Our service significantly improves system recovery time, reduces bandwidth needs and satisfies most regulatory requirements. This cost-effective storage solution results in fewer demands on your internal IT staff, allowing you to focus on your core business.

A Complete Managed Storage Solution

BlueBridge Networks' managed storage service is a complete storage solution that encompasses hardware, software, implementation, maintenance, monitoring, onsite operation and 24x7x365 support. Reliability, availability, security and scalability are ensured by the use of proven, state-of-the-art technologies from EMC®, VMWare®, Dell® and Cisco®. The system always stores at least one set of your data in a near-line capacity and backs up this information to tape with optional rotation strategies based on your needs.

Customer O/S and Software Compatibility

BlueBridge Networks supports almost all UNIX, LINUX and Microsoft platforms. In addition to operating system support for Microsoft, we can manage storage for almost any application. Additionally, we support all major database vendors: Oracle, DB2, MS SQL Server, Informix, Sybase and others. Diverse software packages can be deployed, depending on the customer's needs and the service configuration selected.

BlueBridge Networks Resources

Our experienced storage solution team can simplify the task of managing your rapidly increasing storage environments and their associated costs. BlueBridge Networks resources will design, procure, implement, manage and monitor full systems, including remote attached SAN and backup systems. In addition, we have monitoring services that scrutinize everything from network bandwidth to system swap issues, paging the support team when the slightest issue arises – all through a separate hardware/software platform.

Combining our best-in-class networking technologies with world-class management solutions enables us to offer you highly available, flexible and cost-effect back-up and storage solutions.
